

Make a webpage to encrypt a given string using a Caesar Cipher. The end result should look something like this:

Caesar Cipher

	Shift =	<input type="text" value="1"/>	▼
INPUT	=	<input type="text" value="Karelia"/>	
OUTPUT	=	<input type="text" value="Lbsfmjb"/>	

It must include:

1. A dropdown (select element) to select the key
2. An input text field and an output text field (the output should be editable)
3. A field where the output is displayed

The output should update automatically when the input is changed.
